**New Vegetables For California Farms**

**Result Of Research**

(Continued from page 1)

---

**Family Selection And Progeny Testing Of Onion Variety For Higher Egg Production**

As abstract of a talk delivered at the Annual Convention of the California Baby onion Growers at Santa Barbara, June 22, 1947.

---

**Oil Spray As Weed Control and Related Crops**

A. S. Crafts

Welding is a costly and laborious operation in some crops, as at Santa Barbara, June 22, 1947. It usually requires much hand labor.

---

**OLIVES**

California has approximately 90,000 acres of olive groves and production of the United States. Many of these olives are predicted to be picked as usual; but in some cases, they are not likely to be harvested unless they are picked by hand labor.

---

**WEED CONTROL**

The use of oil sprays for weeding carrots and related crops is discussed elsewhere in this issue of California Agriculture. The use of oil sprays for weeding carrots and related crops is discussed elsewhere in this issue of California Agriculture.

---

**DONATIONS FOR AGRICULTURAL RESEARCH**

Gifts from the College of Agriculture, California University, Berkeley, accepted May 25, 1947.
