INDEX—1958

Volume 12, January to December, Inclusive

Requests for back numbers will be filled, without charge, so long as supplies last. Address all requests to CALIFORNIA AGRICULTURE, 22 Giannini Hall, University of California, Berkeley 4, California.

AIRCRAFT
Spraying
Chamise control
April, page 9

ALBINISM
Citrus seedlings
Fungicide treatment
March, page 7

ALFALFA
Pelleted hay
Feeding trials
April, page 8

ALMOND
Bulk sampler
Pneumatic device
Aug., page 3

AMMONIA
Fertilizer concentrations
Rate of nitrification
Oct., page 9

ANTIBIOTIC
Aureomycin
Feeding calves
Jan., page 12

APPLE
Rosy apple aphid
Winter sprays
Jan., page 3

BARLEY
Hooded Atlas
For higher elevations
July, page 11

BEANS
Garbanzos
Yellowing diseases
Nov., page 6

BEES
Effects of pesticides
On pollinators
Dec., page 3

BIological CONTROL
Soft scale on walnut
Destruction of parasites
Nov., page 13

CITRUS
Albinism in seedlings
Fungicide treatment
March, page 7

COTTON
Machine picking
Yields and costs
June, page 2

CUTTINGS
Grape rootstocks
Disbudding machine
July, page 8

DAIRY INDUSTRY
Anticipated expansion
Outlook for 1975
Nov., page 2

DEFICIENCY
Boron in prunes
Brushy branch disease
Aug., page 8
Micronutrients in avocado
Effects of chemical nitrogen
Feb., page 11
Effects of phosphates
Oct., page 10
Potash in potato
Madera County
July, page 10
Santa Maria Valley
June, page 8; page 9
Sulfur
Widespread
Nov., page 10
Zinc
Chelates for steep land
June, page 4

DEFOLIATION
Bartlett pears
Cyanamid dust
Sept., page 12

DISBUDDING
Grape rootstocks
Electric saw or wirewheel
July, page 8

DISEASES, ANIMAL
Brucellosis in dairy cattle
Ring test using whey
July, page 3
Prevention
Aureomycin in feed
Jan., page 12

DISEASES, PLANT
Apricot leaf scorch
Sodium excess
Sept., page 4
Azalea
Septoria leaf scorch
Oct., page 11
Citrus
Albino seedlings
March, page 7
Leaf tip burn
March, page 9
Easter lilies
Root rot
April, page 3
Garbanzo beans
Yellowing
Nov., page 6
Peach fumigation
Rhizopus rot
July, page 7
Potato black spot
Potash deficiency
June, page 8
Prune brushy branch
Boron deficiency
Aug., page 8
Rose bush crop
Nematodes and bacteria
Sept., page 9

DRAINAGE
Soil
Earthmoving machinery
June, page 3

F

FEED
Alfalfa
Pelleted hay
April, page 8
Antibiotic
Aureomycin for calves
Jan., page 12
Oat hay
Stage of plant maturity
May, page 4

FERTILIZERS
Ammonia
Rate of nitrification
Oct., page 9
Micronutrients
Boron for prunes
Aug., page 8
Effects of chemical nitrogen
Feb., page 11
Influence of phosphates
Oct., page 10
Iron, zinc foliage sprays
March, page 8
Zinc chelates for avocado
June, page 4
Nitrogen on olive
Variable responses
Dec., page 6
Placement for tomatoes
Phosphorus and nitrogen
Aug., page 11
Plum
Leaf analyses
Feb., page 10
Potash for potatoes
Internal black spot
June, page 8
Leaf analyses
July, page 10
Soil deficiency
June, page 9
Preharvest nitrogen
Yields of beet sugar
Aug., page 7
Timber trees
Soil fertility levels
June, page 6
Urca
Movement in soils
Dec., page 9
Yields of navel oranges
Tillage, water uptake
March, page 5

FOOD PRODUCTS
Frozen foods
Shelling beans
May, page 2
Strawberry processing
Sept., page 2
Marketing
Canned fruits
Oct., page 2
Fresh and processed oranges
March, page 2
Milk composition
Seasonal variations
July, page 4

FORAGE
Deerbrush
Nitrogen-fixation
Jan., page 11

FORESTRY
Deerbrush
Nitrogen-fixation
Jan., page 11
Prescribed burning
Manzanita in ponderosa
Feb., page 12
Timber trees
Response to fertilizers
June, page 6

FROST PROTECTION
Citrus orchards
Heaters and wind machines
Aug., page 4

FRUIT SET
Gibberellin tests
Citrus
May, page 9
Clementine mandarin
May, page 5
Grapes
Feb., page 6
Winter chilling
Yields of olives
May, page 6

FUMIGATION
Peaches
Rhizopus rot
July, page 7
Soil treatments
Root-lesion nematode
May, page 7
Sugar-beet nematode
May, page 8

G

GIBBERELLIN
Fruit set
Clementine mandarin
May, page 5
Grapes
Feb., page 6
Lemon, lime, navel orange
May, page 9
Orange fruit
Development and quality

Stimulus to sprouting
White potato tubers
Feb., page 4
Turf treatments
Growth rate of Zoysia
July, page 15

GRAIN
Hooded Atlas barley
18-year breeding program
July, page 11
Sorghum trials
23 hybrids
May, page 3

CALIFORNIA AGRICULTURE, DECEMBER, 1958
NUTRIENT SOLUTIONS
Iron, zinc foliage sprays
Radioactive tracer tests
March, page 8
Tool of research
Citrus tree cultures
March, page 3

OATS
Hay feeding trials
Stage of plant maturity
May, page 4

OLIVE
Fruitfulness
Winter chilling
May, page 6
Nitrogen fertilizers
Variable responses
Dec., page 6
Rootstock varieties
Effect on scion
Sept., page 13

ORANGE
Fruit quality
Gibberellin treatment
Sept., page 11
Mandarin
Fruit set
May, page 5
Marketing
Fresh and processed
March, page 2
Navel
Effect of nontillage
March, page 5
Orchards
Frost protection
Aug., page 4

ORCHARDS
Citrus
Mechanical pruning
Nov., page 7
Frost protection
Heaters and wind machines
Aug., page 4

ORNAMENTALS
Easter lilies
Root rot control
April, page 3
Shorter stems
Dec., page 5
Ivy and other cover plants
Growth inhibitor sprays
June, page 7
Rose bush crop
Nematodes and bacteria
Sept., page 9

P
PARASITES
Plant-parasitic nematodes
Root-lesion on rose
Sept., page 9
Root-lesion on walnut
May, page 7
Sugar-beet
May, page 8
Wasps on insects
Spotted alfalfa aphid
Feb., page 3
Strawberry leaf miner
July, page 12

PEACH
Rhizopus rot
Ammonia gas fumigation
July, page 7

PEAR
Bartlett defoliation
Cyanamid dust
Sept., page 12
Rooting procedures
Hardwood cuttings
Oct., page 4

PHOSPHATES
Influence on micronutrients
Deficiencies in avocado
Oct., page 10

PINE
Manzanita in ponderosa
Prescribed burning
Feb., page 12

PLASTIC
Shelters for new lambs
Construction and tests
Jan., page 8

PLUM
Fertilizer trial
Leaf analyses
Feb., page 10
Rooting procedures
Hardwood cuttings
Oct., page 4

POTASH
Deficiency in potato
Internal black spot
June, page 8
Surveys, Santa Maria Valley
June, page 9
Increased potato yields
Madera County
July, page 10

POTATO
Potash treatments
Increased yields
June, page 9
July, page 10
Internal black spot
June, page 8

SPRING
Gibberellin tests
Feb., page 4
Inhibitor spray
April, page 6

PRUNE
Brushy branch
Boron deficiency
Aug., page 8
Harvesting
Frames and machines
July, page 2
Pickup harvester
Sept., page 3
Skin toughness
Causal factors
Nov., page 14

RANGE
Chamise control
Aircraft spray
April, page 9
Deerbrush
Nitrogen-fixation
Jan., page 11
Drill seeding
Pasture improvement
Oct., page 5

ROOTSTOCKS
Grape cuttings
Dishudding machine
July, page 8
Olive varieties
Influence on tree growth
Sept., page 13

ROSE
Field-grown bushes
Nematodes and bacteria
Sept., page 9

SAFFLOWER
Wild species
Distribution
April, page 4

SAMPLING
Almonds
Pneumatic device
Aug., page 3

SEEDLINGS
Citrus
Albinism
March, page 7
Pine, manzanita
Prescribed burning
Feb., page 12

SPRAYS
Aircraft
Chamise control
April, page 9
Potatoes, growth regulator
April, page 6
Chemical evaluations
European red mite
Feb., page 8
Distribution
Boom, broadcast sprayers
Jan., page 6
Dormant oil, phosphate
Rosy apple aphid
Jan., page 3
Foliage
Absorption of micronutrients
March, page 8

SHEEP
Feeding trials
Oat hay evaluation
May, page 4
New lambs
Plastic shelters
Jan., page 8

SOIL
Drainage
Earthmoving machinery
June, page 3
Fumigation
Root-lesion nematode
May, page 7
Sugar-beet nematode
May, page 8
Moisture measurement
Neutron equipment
Dec., page 8
Salinity
Apricot irrigation
Sept., page 4; page 6
Seedling care
Sept., page 7
Sulfur deficiency
Statewide survey
Nov., page 10
Tillage and fertilizers
Relation to water intake
March, page 5
Urea
Downward movement
Dec., page 9

Sorghum
23 hybrids
Yield, adverse conditions
May, page 3

SPINACH
Crown mite damage
Chemical treatment
Feb., page 9
Weed control
Cyanamid for winter crop
Oct., page 7

CALIFORNIA AGRICULTURE, DECEMBER, 1958
that of Los Angeles County. Since 1950, Tulare has exceeded Los Angeles. In general, fruit and nuts have been the main crops of Tulare which is one of the few counties whose output of this group has increased in value since the war. Consequently, Tulare’s record fruit and nut crop of 1957 accounted for as much as 34% of the total value of the southern California fruit and nut crop.

The expansion of the livestock industry in Tulare County is most striking. The value of the industry’s output in the last three years was more than 2.5 times as great as in 1943 and nearly six times the 1941 figure. Tulare still ranks second to Los Angeles in livestock but its share in the southern California output has increased to 14%. The value of Tulare’s field crops—primarily cotton—expanded until 1951, then tended to fall, more sharply than that of Kern or Imperial counties. But Tulare remains the third largest producer of field crops in southern California. Tulare is a comparatively unimportant producer of vegetables.

Kern County exceeds Los Angeles County in value of total farm output—prewar it was less than half as much—mainly because of expansion in field crops and in vegetables. In the last three years Kern County has accounted, on average, for nearly 30% of the total southern California output of field crops and 20% of the vegetables. Also, Kern County produces nearly half the southern California cotton crop and derives a third or more of its agricultural income from cotton. However, there is no marked upward trend in total agricultural returns or in the values of any of the four product groups in Kern County.

Orange County ranked third among the 12 southern counties prewar and then exceeded Kern, but the value of its farm production today is only half that of Kern County. The relative decline of Orange County in farm value is linked with the fruit and nut sector, particularly with the decline in the output of field crops. In the last three years, the value of the orange crop never recovered the high level of 1941 figures. The subsequent contraction has been more than offset by a rapid and continuous increase in the output of livestock products, especially dairy products and eggs.

San Bernardino County which also derived two thirds of its prewar farm income from fruits and nuts—mainly citrus—has experienced a similar development. The contraction in the fruit and nut crops was even more severe than in Orange County and the present dollar value of those crops is little more than in 1941. However, livestock production expanded earlier and more rapidly, and the recent output of this group of products was worth more than twice as much as the fruit and nut crops. Much of this expansion was in eggs and San Bernardino County is now by far the largest egg producer in southern California.

Ventura and Riverside counties also specialized heavily in fruit and nut crops, but like Tulare, have more than maintained the value of these crops during the postwar period and recently obtained record dollar returns. Ventura County has become the second largest fruit producing county, producing about half as much as Tulare; and Riverside has also become more important. Nevertheless, the extent of this specialization, especially in the case of Riverside County, has declined. The outputs of livestock—mainly cattle and calves—in both counties and of vegetables in Riverside County have grown rapidly and livestock has replaced fruit as Riverside’s major product group. In Ventura County—though there has been a sudden recent expansion in the small 15 CALIFORNIA AGRICULTURE, DECEMBER, 1958
